## Math for stage lighting

The following is a collection of math formulas that can prove useful to lighting designers and electricians.

Power:
Watts $=$ Volts * Amps
Amps $=$ Watts $/$ Volts

Sine Wave (VAC):<br>RMS Volts $=0.707 \times$ Peak Volts<br>RMS Volts $=1.11 \times$ Average Volts<br>Peak Volts $=1.57 \mathrm{x}$ Average Volts<br>Peak Volts $=1.414 \times$ RMS Volts<br>Average Volts $=0.637 \times$ Peak Volts<br>Average Volts $=0.9 \times$ RMS Volts

## DC voltage drop of conductor (cable) of $L$ length

$\mathrm{V}=$ voltage drop, $\mathrm{I}=\mathrm{current}$
$\mathrm{R}=$ resistance of conductor per 1000 feet
$\mathrm{L}=$ length of conductor in feet
R for $18 \mathrm{awg}=6.51,16 \mathrm{awg}=4.09,14 \mathrm{awg}=2.58$
$12 \mathrm{awg}=1.62,10 \mathrm{awg}=1.02,8 \mathrm{awg}=0.64$
$\mathrm{V}=\mathrm{I} * \mathrm{~L} *(\mathrm{R} / 1000) * 1.004$

## Unit Conversions:

inches $=$ millimeters $/ 25.4$
millimeters $=$ inches $* 25.4$
feet $=$ meters $/ 0.3048$
meters $=$ feet $* 0.3048$
footcandles = lux / 10.8
lux $=$ footcandles * 10.8
Centigrade $=0.556^{*}($ Fahrenheit - 32)
Fahrenheit $=1.8 *($ Centigrade +32$)$
pounds $=$ kilograms $* 2.205$
kilograms $=$ pounds $* 0.454$
degrees $=180 *$ radians $/ \mathrm{PI}$
radians $=\mathrm{PI} *$ degrees $/ 180$

Pattern projection magnification and required pattern size:
$\mathrm{A}=$ new pattern size, $\mathrm{B}=$ old pattern size,
$\mathrm{C}=$ new projection size, $\mathrm{D}=$ old projection size
$\mathrm{P}=$ projection magnification
for standard AQ61 (or Altman 360Q) ellipsoidals, consider old pattern size to be 3" (size of gate), and old projection size to be the beam spread using the field angle information. Check diameter of gate (shutter plane opening) for other fixtures.
$\mathrm{A}=\mathrm{B} *(\mathrm{C} / \mathrm{D})$
$\mathrm{P}=\mathrm{D} / \mathrm{B}$

## Distances, intensities, spreads, and angles:

As seen in the drawing to the right:
$\mathrm{D}=$ throw distance, $\mathrm{V}=$ vertical height, $\mathrm{H}=$ horizontal distance, $\mathrm{C}=$ focus angle off horizontal, $\mathrm{K}=$ focus angle off vertical, $\mathrm{F}=$ beam or field angle of fixture
$\mathrm{X}=$ beam spread (beam oval width), $\mathrm{Y}=$ beam oval length $\mathrm{mf}=$ beam spread multiplying factor

## footcandles:

Footcandles =
Candlepower / (D * D)
candlepower:
Candlepower =
Footcandles * (D * D)

```
beam angle multiplying
factor (mf):
mf=2 * TAN(F/2)
mf= X / D
beam angle (F):
F =2* ATAN(mf/2)
F=2* ATAN(X / (2* D) )
```

## beam spread (oval width $X$ if not straight on):

$\mathrm{X}=\mathrm{D} *(2 * \mathrm{TAN}(\mathrm{F} / 2))$
$\mathrm{X}=\mathrm{D} * \mathrm{mf}$

```
beam oval length (Y) (when beam hits surface at angle):
\(\mathrm{Y}=\mathrm{V} *(\mathrm{TAN}(\mathrm{K}+\mathrm{F} / 2)-\mathrm{TAN}(\mathrm{K}-\mathrm{F} / 2))\)
throw distance (D):
\(\mathrm{D}=\mathrm{X} / \mathrm{mf}\)
\(\mathrm{D}=\operatorname{SQUARE} \operatorname{ROOT}((\mathrm{V} * \mathrm{~V})+(\mathrm{H} * \mathrm{H}))\)
\(\mathrm{D}=\mathrm{H} / \operatorname{COS}(\mathrm{C})\)
\(\mathrm{D}=\mathrm{V} / \operatorname{SIN}(\mathrm{C})\)
\(\mathrm{D}=\mathrm{H} / \operatorname{SIN}(\mathrm{K})\)
\(\mathrm{D}=\mathrm{V} / \operatorname{COS}(\mathrm{K})\)
D = SQUARE ROOT(Candlepower / Footcandles)
horizontal distance (H):
\(\mathrm{H}=\operatorname{SQUARE} \operatorname{ROOT}((\mathrm{D} * \mathrm{D})-(\mathrm{V} * \mathrm{~V}))\)
\(\mathrm{H}=\mathrm{V} / \operatorname{TAN}(\mathrm{C})\)
\(\mathrm{H}=\mathrm{D} * \operatorname{COS}(\mathrm{C})\)
\(H=D * \operatorname{SIN}(K)\)
\(\mathrm{H}=\mathrm{V} * \mathrm{TAN}(\mathrm{K})\)
vertical height (V):
\(\mathrm{V}=\operatorname{SQUARE} \operatorname{ROOT}\left((\mathrm{D} * \mathrm{D})-\left(\mathrm{H}^{*} \mathrm{H}\right)\right)\)
\(\mathrm{V}=\mathrm{H}^{*} \operatorname{TAN(C)}\)
\(\mathrm{V}=\mathrm{D} * \operatorname{SIN}(\mathrm{C})\)
\(\mathrm{V}=\mathrm{D} * \operatorname{COS}(\mathrm{~K})\)
\(\mathrm{V}=\mathrm{H} / \mathrm{TAN}(\mathrm{K})\)
```

## focus angle off horizontal (C):

```
C \(=\operatorname{ATAN}(\mathrm{V} / \mathrm{H})\)
\(\mathrm{C}=\operatorname{ASIN}(\mathrm{V} / \mathrm{D})\)
\(\mathrm{C}=90-\operatorname{ASIN}(\mathrm{H} / \mathrm{D})\)
C \(=90-\mathrm{K}\)
focus angle off vertical (K):
\(\mathrm{K}=\operatorname{ATAN}(\mathrm{H} / \mathrm{V})\)
\(\mathrm{K}=\operatorname{ASIN}(\mathrm{H} / \mathrm{D})\)
\(\mathrm{K}=90-\operatorname{ASIN}(\mathrm{V} / \mathrm{D})\)
\(\mathrm{K}=90-\mathrm{C}\)
```
